

SOCIAL ENTREPRENEUR OF THE YEAR INDIA 2014

Social Entrepreneurship for Inclusive Growth

Introduction

Professor Klaus Schwab founder of **World Economic Forum** along with his wife Hilde founded the **Schwab Foundation for Social Entrepreneurship** in 1998, with the purpose to promote entrepreneurial solutions and social commitment with a clear impact at the grassroots level.

The World Economic Forum and the Schwab Foundation work in close partnership to provide social entrepreneurs with unique platforms at the regional and global levels to showcase their important role and work in today's society.

*Prof. Klaus Schwab
and Hilde Schwab*

Jubilant Bhartia Foundation, is a not for profit organisation setup in 2007 as section 25 company, with a mission ' to develop multi-stakeholder sustainable models to bring about a progressive social change involving knowledge generation & sharing, experiential learning and an entrepreneurial ecosystem' . The foundation focuses on conceptualizing and implementing Corporate Social Responsibility (CSR) initiatives for the Group. The Jubilant Bhartia Foundation's activities include various community development works, healthcare programs, cultural and sports events, environmental preservation initiatives, vocational training, women empowerment and educational activities.

S S Bhartia and H S Bhartia

The Importance of Social Entrepreneurship

Social entrepreneurship applies practical, innovative, and sustainable approaches to benefit society, with an emphasis on the marginalized and the socio economically disadvantaged. Social entrepreneurs drive transformative change across all different fields and sectors, including but not limited to health, education, environment, and enterprise development. They pursue their social mission with entrepreneurial creativity, business methods, and the courage overcome traditional practices.

Foreword

The Schwab Foundation for Social Entrepreneurship and the Jubilant Bhartia Foundation are dedicated to promoting social innovation in India through the annual Social Entrepreneur of the Year India Awards. In recognizing social entrepreneurs who address the needs of under-served communities in both scalable and sustainable ways, we aim to make inclusive growth in the country a reality.

The Schwab Foundation, a sister organization of the World Economic Forum, manages a global community of social entrepreneurs and engages it in shaping global, regional and industry agendas that improve the state of the world in close collaboration with the other stakeholder communities of the World Economic Forum. The Schwab Foundation has been selecting social entrepreneurs in India since year 2001 and is proud and honoured to collaborate with the Jubilant Bhartia Foundation in this fifth year of partnership.

This year we received 189 applications and selected three finalists after a multiple rounds of rigorous assessment:

- **Mr H Sudarshan** (Karuna Trust)
- **Mr Matthew Spacie** (Magic Bus)
- **Mr Yogendra Bhushan** (Bodh Shiksha Samiti)

Our national jury consists of an independent panel of eminent leaders from business, media and civil society. We are grateful for the jury's insights and contributions to the selection process. We thank you for joining us in congratulating finalists of the Social Entrepreneur of the Year search and selection process. All finalists exude business acumen, operational excellence and most importantly an unwavering social commitment to the people of India.

We would also like to acknowledge with deep appreciation the contributions of our media partner HT Media Limited and CNBC-TV18 and all other media involved in bringing due recognition to social entrepreneurs and their work and most importantly all the social entrepreneurs who have made this journey very exciting.

Hilde Schwab

Co-Founder & Chairperson
Schwab Foundation for Social Entrepreneurship

Shyam S Bhartia

Director, Jubilant Bhartia Foundation
Chairman & Managing Director,
Jubilant Life Sciences Limited

Criteria for Selection

We select late-stage social enterprises that have demonstrated large-scale systemic change and impact. In particular, we assess based on the following criteria:

- **Innovation:** The candidate has transformed traditional practice through an innovative product, service, technology, or approach.
- **Sustainability:** The organisation is achieving some degree of financial self-sustainability through earned revenues or is engaged in creating mutually beneficial partnerships with business and/or the public sector.
- **Direct Social Impact:** The candidate implements the initiative directly with poor or marginalised people and/or communities. Impact manifests itself in qualitative and quantifiable results, rigorously measured over a period of time.
- **Reach and Scope:** The candidate's initiative has spread beyond its initial context and has been adapted successfully to other parts of the country or internationally, either by the entrepreneur him/herself, or through others who have replicated or adapted elements of it.
- **Replicability:** The initiative can be adapted to other regions of the world to solve similar problems.

About our Media Partners

CNBC-TV18 is India's number one business medium and the undisputed leader in business news. CNBC-TV18 has been an integral part of the Indian economic story, spearheading and mirroring these enterprising times. The channel's benchmark coverage extends from corporate news, financial markets coverage, expert perspective on investing and management to industry verticals and beyond. CNBC-TV18 has been constantly innovating with new genres of programming that helps make business more relevant to different constituencies across India. India's most able business audience consumes CNBC-TV18 for their information and investing needs. CNBC-TV18 is currently available in over 30 million households in India.

First in Business Worldwide
CNBC-TV18

HT Media found its beginning in 1924 when its flagship newspaper, Hindustan Times was inaugurated by Mahatma Gandhi. HT Media (BSE, NSE) has today grown to become one of India's largest media companies.

Produced by an editorial team known for its quality, innovation and integrity, Hindustan Times (English newspaper) and Hindustan (Hindi newspaper through a subsidiary Hindustan Media Ventures Limited), Hindustan Times is the choice for nearly 3.7 million readers across India, who turn to it daily for news, information, analysis and entertainment. Hindustan, the group's Hindi daily, continues to be the second-largest daily in the country with a total readership of 36.6 million, (based on Indian Readership Survey (IRS) for the first quarter (Q1) of 2011. Both dailies enjoy a strong brand recognition among readers as well as advertisers.

Mint is a one-of-its-kind newspaper in the sense that the company has an exclusive agreement with the Wall Street Journal to publish Journal-branded news and information in India. The national business newspaper Mint is also published by HT Media in addition to Hindustan Times. Mint is today the second-largest business newspaper in India with presence in the key markets of Delhi, Mumbai, Chennai, Bengaluru, Chandigarh, Pune, Kolkata and now Ahmedabad too.

Year India 2014

H Sudarshan

Karuna Trust

www.karunatrust.com

Finalist- Social Entrepreneur of the Year 2014

Karuna Trust is transforming dysfunctional government primary healthcare centers (PHCs) into professional hubs of 'last mile' healthcare service delivery.

It has pioneered a Public Private Partnership (PPP) model that brings the government, the village community and the social venture together to deliver high quality primary healthcare to rural India. The government invests in upgrading infrastructure and pays for the efficient running of the PHCs; Karuna Trust brings in healthcare management systems and disruptive health innovations to the centers; village health councils hold their PHCs accountable for reporting higher health outcomes and functioning as zero-corruption zones.

Focus

Health

Background

Primary health care is back bone of Indian Healthcare delivery system. It acts as connecting link between community and healthcare delivery system. India spends around 4.1% of GDP on health (2013). However, only 1.1 % of GDP is spent on public health (Human development report 2010). This is much below the WHO recommendation of expenditure of at least 5% of GDP for the public health.

Various studies have highlighted the poor quality of health care delivery in India, especially in the rural areas, with respect to all the aspects of health delivery system, namely, structure, processes and outcome. Rural health care facilities suffer from a chronic problem of absenteeism of the staff at all the levels and lack of proper infrastructure (Banerjee et al., 2004). The quality of clinical care delivered to the patients is perceived to be low in both aspects, technical and interpersonal (Das and Hammer, 2007 a). There is a considerable gap between the 'what the doctors know and how they treat the patients. Doctors tend to spend less time with the patient, don't delve deep into the history

and clinical picture and they tend to 'overprescribe' (Das and Hammer, 2007 b). The health care delivery infrastructure in India is far short of the requirements. There are only 1.03 beds per 1000 population in India as compared to the world average of 7.3 beds per 1000 population (Health care industry report, ISI Analytics, 2010). Moreover, 75 % of the health care infrastructure and manpower is concentrated in urban areas where only 27 % of the population resides (Patil et al., 2002). Therefore there is a considerable under performance in primary health care services, especially in rural and remote areas.

Innovation and Activities

Karuna Trust has revitalized 67 PHCs across 7 states, half of which reach remote corners of North-East India. With ISO certification, trained medical and administrative teams, zero-absenteeism of doctors, upgraded infrastructure, tele-medicine, mobile medical units, efficient supply chain of essential medicines and a citizens help desk, PHCs run by Karuna Trust have raised the bar for primary healthcare service in India. They have served more than one million patients and reported health outcomes that are amongst the highest in the country.

The Entrepreneur

In 1986, Dr Sudarshan founded Karuna Trust in response to the alarming incidences of leprosy in the Yelandur Taluk of Karnataka. He and his health team worked tirelessly to control the disease and have successfully brought down the incidence of leprosy from 21.4 per 1000 people to less than 0.28, almost eradicating it. For more than three decades, Dr. Sudarshan has been pushing the boundaries of rural health systems making them responsive and accountable to the poorest and most marginalized communities.

His dedication has won Dr. Sudarshan critical acclaim and several awards. Significant among them are the Right to Livelihood Award (1994) and the Padma Shri (2000).

Matthew Spacie

Magic Bus

www.magicbus.org

Finalist- Social Entrepreneur of the Year 2014

Magic Bus has pioneered a 'Sport for Development (S4D)' curriculum that harnesses the transformative power of sport to enable children from impoverished communities to tap into their potential, reflect on life choices, and take positive development decisions for themselves with regard to education, health, livelihoods and leadership – factors that are critical for their growth as active citizens.

Focus

Education and Sports

Background

Article 21 A of the constitution of India and its consequent legislation, the Right of children to Free and Compulsory Education Act, 2009 (RTE)¹, became operative in the country on 1st April 2010. This development has far reaching implications for elementary education and for the implementation of Sarva Shiksha Abhiyan (SSA), the flagship programme for achieving universal primary education, in the years to come. This development implies that every child has a right to elementary education of satisfactory and equitable quality in a formal school which meets certain essential norms and standards. The Act provides free and compulsory education to all children of 6-14 years of age. Government of India facilitates the delivery of these provisions in partnership with state governments through the SSA.

Due to launching of various schemes and programmes by the Government at school level, the enrolment of students at primary, upper primary has increased many folds. Regardless, dropout rate and regularity in attendance still remain major issues.

Innovation and Activities

Magic Bus has delivered the S4D curriculum to 500,000 children in the age group of 7-18 years across 19 states through a trained network of 8,000 Community Youth Leaders. Community youth leaders are local role models who hail from the same eco-system as the children they train. 50% of all Magic Bus participants constitute girls from disadvantaged families. Today, 99% of Magic Bus children are enrolled in schools; 77% children attend school more than five days a week and 95.7% children intend to continue higher education.

Magic Bus has partnered with the education departments of seven states to embed S4D into the government system. Over the next three years, Matthew and his team aim to reach 1 million children of India and expand the S4D model to South and South-East Asia.

The Entrepreneur

Formerly Chief Operating Officer of Cox and Kings and Founder of Cleartrip.com, Matthew comes with an extensive experience in senior positions in the corporate sector and an intuitive understanding of the needs of the development sector. In 1999, Matthew established Magic Bus, and he has grown the organisation from volunteers conducting informal rugby sessions and one-off outdoor camps for disadvantaged children, into a premier organisation working in the area of mentoring less privileged children from childhood to livelihood. Matthew has been elected an Ashoka Fellow, a TED Fellow and more recently an ACSEP Asia Centre for Social Entrepreneurship and Philanthropy (ACSEP) Fellow. In 2007, he was awarded an MBE for services to children in the Commonwealth.

Yogendra Bhushan

Bodh Shiksha Samiti

<http://www.bodh.org/>

Finalist- Social Entrepreneur of the Year 2014

Bodh Shiksha Samiti has galvanized India's ultra-poor communities to transform their villages and slums into centers of education excellence. It has pioneered the common schools movement, where schools (called Bodhshalas) are built, managed and co-owned by, mostly BPL, communities in areas untouched by the government education system.

Focus

Education

Background

In India, more than ten million children who are of the age to receive compulsory education remain excluded from the education system, primarily because they come from marginalized communities. For the rest who do go to school, recurring studies have shown that they receive poor quality education, especially in primary school. Unsurprisingly, the latest Programme for International Student Assessment (PISA), an international study comparing students' performance worldwide, ranked the quality of education in India 63 among 64 surveyed countries. Further, the Annual Status of Education Report (2011) confirms that 48.2% of students in the fifth grade can read at the second grade level. The statistics become more alarming for segments of children who are pushed out of the education net due to gender and other identity-based factors.

Innovation and Activities

Families contribute land, labour and capital (often as high as INR 9-10 Lakhs), to set up and scale their Bodhshalas from primary to secondary levels. Students, parents and teachers drive school management and keep a strict eye on education quality. As a result, Bodhshalas typically achieve 99% enrolment of male and female students, drop-out rates of less than 10% and learning outcomes that are higher than government and affordable private schools of India. Bodh has set up more than 245 common schools in

Rajasthan. More than 90% of Bodhshala students are first-generation literates.

After three decades of ground-up education reform, Bodh has impacted more than 20 lakh students and 80,000 teachers in Rajasthan. Its innovations for deepening education quality have been embedded in 20,500 government schools of Rajasthan, Himachal Pradesh and Jharkhand. Additionally, 100 social ventures have partnered with Bodh to scale the common school model to 13 states.

The Entrepreneur

Yogendra Bhushan was born in 1955 in a small village in Rajasthan. The youngest of five children, his family was among the first to open the gates of education to their community. Yogendra's father was the first government teacher from his district. As an active leader of a progressive intellectual movement, his leftist leanings greatly influenced Yogendra. Yogendra was an academically strong student until he reached Rajasthan University. As a student there, he became intensely involved with the progressive Communist Movement (the center of intellectual drive in the state.) This marked the beginning of Yogendra's political activism, which lasted for over a decade and sharpened his worldview, as he learned about reality's underbelly. His deep appreciation for the needs of disadvantaged children led to his convictions that "quality education is the basic minimum that the society and state owe to the children, irrespective of their social status." Yogendra studied law later and practiced in the Rajasthan High Court for six months. Hemmed in by the formalities and bureaucracy, he left the job.

Inspired by Jay Prakash Narayan, a populist political leader during India's Emergency rule in the 1970s, and his call to the youth to understand urban poverty, Yogendra began working in Jaipur's largest slum. This work provided inspiration for what is today widely acclaimed as the "Bodh approach to education."

Schwab Foundation Social Entrepreneurs - India

Anshu Gupta

Goonj

www.goonj.org

Schwab Foundation Social Entrepreneur

Goonj had demonstrated that 'cloth' can be a powerful development resource for India's last-mile communities. Goonj collects, sorts, repurposes and redistributes the excess and under-used resources of urban households to the rural and urban poor, where 'material poverty' is the deepest.

Focus

Clothing for Development

Background

There always existed a rural-urban divide in terms of economic and social development. But this divide has also been widening in the recent past. Ratio of urban to rural income which was just about 1.6 in 1951 and continued to remain within reasonable limit during the first three decades of development planning to reach 2.1 in 1980-1981, worsened during the last two decades to record a level close to 4.5. While large and medium cities are experiencing unprecedented economic prosperity, the rural areas have been experiencing economic stagnation. While the share of agriculture in the national income declined from about 30 per cent to almost half, the share of population dependent on agriculture remains almost the same over the last two decades. With the withdrawal of the State from critical support services for agriculture, global competition and higher risk of commercial cultivation, farmers especially those with small holdings, have been experiencing unmitigated misery. The reports of rampant farmers' suicide from various States, is only one of the symptoms of the current rural distress.

Innovation and Activities

Village and slum communities, in exchange of cloth and material, conduct self-organized local development and infrastructure building programs, leading to more than 500 infrastructure projects every year – such as the setting up of schools, concrete roads, bridges,

wells, irrigation canals and toilets across 1500 villages. The 'Cloth for Work' approach spurs behaviour change on both the demand and supply sides: marginal communities begin to believe in their own capacity for catalyzing change and urban India learns to contribute (rather than dispense) material, based on what the poor need.

Every year, Goonj collects, reproduces and transports 1000 tonnes of materials to ultra poor communities in 21 states through a country-wide network of 250 grassroots NGOs, 200 engaged business houses, 100 schools and 500+ volunteers, at the cumulative cost of 97 paise per kg of material. Goonj's sanitary napkins program, created by remnants of waste cloth, has opened up a new field of development intervention in female reproductive health, with more than 2 million sanitary napkins distributed to first-time rural women users.

Through its non-monetary and non-market model, Goonj is thus creating 'cloth and material rich' communities where the meagre resources of poor families can be freed up for urgent expenditures (rather than for the purchase of cloth), and village and slum infrastructure can be less dependent on outside funding.

The Entrepreneur

Popularly known as the Clothing Man, Anshu has an educational background in mass communications and economics. Starting as a freelance journalist, Anshu left a corporate job in 1998 and founded GOONJ with a mission to make clothing a matter of concern and to bring it among the list of subjects for the development sector. An Ashoka Fellow and the Global Ambassador of Ashoka, Anshu is creating a mass movement for recycling and reuse of tones of waste material by channelising it from the cities to the villages, as a resource for rural development.

Amitabha Sadangi

International Development Enterprises India (IDEI)

www.ide-india.org

Schwab Foundation Social Entrepreneur

IDEI designs and develops micro-irrigation technologies that save up to 50-70% of water use and increase crop yields by 30-40% in 226 districts of India and other parts of the world.

Focus

Agriculture, Rural Development, Water

Background

Small farms comprise 70% of India's total agricultural map, and about 60% of India's cultivable land is rain fed and remains critically dependent on dry land farming. Most farmers lack any insurance against risks caused by monsoons and falling groundwater levels, as well as fluctuations in the international farm commodity markets. Despite 80-90% subsidies for irrigation and farm technologies, they remain out of reach for small farmers. These factors, coupled with severe water crises, often contribute to poverty and large-scale migration.

Innovations and Activities

Recognizing the high correlation between rural poverty and lack of access to water, IDEI designs, develops and delivers small plot irrigation technologies that are commercially viable, environment friendly, scaled down to fit one-tenth of a hectare plots, and cost 20% of competitive models. The technologies are sold through village supply chains to smallholder farmers at an unsubsidized market price. IDEI also provides technical, financial, consulting and business development services to its customers, enabling them to enter high-value commercial agriculture. As a result, smallholder farmers have been able to earn an additional average net income of US\$ 400 annually, thus emerging from the poverty trap.

Over one million smallholder farmer families have been reached through IDEI low-cost irrigation technologies, such as the treadle pump and drip irrigation. A foot-

operated treadle pump can irrigate small plots of land in regions with water tables higher than 8 metres; 58% of treadle pumps have been sold to farmers who had previously not been able to afford any irrigation technology and 42% have replaced diesel pumps, which require farmers to pay annual rentals of more than US\$ 70. The drip irrigation system is promoted for farm families living in arid, water scarce regions. The technology saves 50-70% in water usage and increases crop yields by 30-40%. Seventy local manufacturers produce irrigation products sold under the KB brand by a network of nearly 5,100 retailers and village mechanics in 226 Indian districts.

Customer satisfaction is tracked through a management information system and feedback is incorporated to further refine the products. The treadle pump for example, has been customized and is available in several variations to meet regional farming requirements. IDEI also builds the supply chains and credit mechanisms necessary for farmers to succeed. An independent assessment conducted by IDEI in 2006 revealed a notable shift in India from subsistence to profitable small-scale commercial farming. Farmers now cultivate throughout the year, which contributes to increased food security and a decline in migration; 20% reported investing income in their children's education and 15% have increased spending on family health. IDEI is now exporting its technologies to countries in Africa and Southeast Asia.

The Entrepreneur

Amitabha Sadangi was born in a village in the state of Orissa, India. He holds a law degree and a post-graduate degree in Labour and Social Welfare. While working for Oxfam, he focused many of his ideas around market-based programmes for poverty alleviation. He is co-Founder of a for-profit company, Global Easy Water Products, which allows private investment in the spread and replication of its irrigation technologies.

Arbind Singh
Nidan
www.nidan.in
Schwab Foundation Social Entrepreneur

Nidan creates institutions and programmes which promote the economic and social development of India's poorest and marginalized workers.

Focus

Labour and Employment, Enterprise Development, Waste Management

Background

There are over 340 million workers, or roughly 92% of the country's working population, in India's informal sector. They contribute to about 60% of the national economic output. Despite their vast numbers and substantial contribution to the economy, they represent the poorest segments of the population. On average, these workers do not earn much more than US\$ 1 per day and work is often seasonal. They do not belong to unions and are regularly exploited for their labour.

Innovation and Activities

Nidan builds profitable businesses and organizations led by workers from the informal sector, including waste workers, rag pickers, vegetable vendors, construction labourers, domestic helpers, farmers and street traders. It does this by tapping into the wealth of the poor, primarily their numerical strength, and then aggregates them into economies of scale. This process of "collectivizing" generates social capital, representation and a voice for the poor, which they then leverage to launch their own businesses. Businesses launched by Nidan have brought together 400,000 workers from the informal sector and positioned them as legitimate competitors in markets opening up throughout the country.

As an entry point, Nidan moves into neighbourhoods to train and align individuals into profession-based groups. These groups quickly generate connections between individuals as they learn to link their personal struggles to the challenges of their occupational sectors. Once fragmented, traders and service providers now organize into broad-based occupational pressure groups; each group is a nascent enterprise

to be mentored until it emerges as an independent identity and registers profit curves. Every enterprise is decentralized and independent, with growth and operations left entirely to shareholders. Most are large enough to affect significant policy shift. As an example, the Nidan-initiated National Association of Street Vendors of India (NASVI), with its 300,000 members across 20 states, has successfully lobbied for the passage of the Act for Urban Vendors, a first for the country.

As entrepreneurs these informal workers are reporting income growths of 100% or more. Waste collectors, for example, have realized a 200% increase in their annual incomes. Secure and regular income growth has led to improved access to social security, education, childcare and legal aid. Some 100,000 children of Nidan members, who previously could not access education, now go to formal and community schools launched by Nidan in urban Patna and Samastipur districts in the India state of Bihar.

Most significantly, Nidan is returning a culture of accountability and honest enterprise to underdeveloped states and organizations of informal workers. Its contracts are secured without bribes and at competitive market rates. This has solidified the confidence of the poorest in transparency and collective action. Nidan has also made forays into skill development and solar light production accessible to workers.

The Entrepreneur

Arbind Singh spent his early years in Katihar, a district in India's northeast state of Bihar, which is a hub of first-generation migrants who came to the area in search of work. As a child, he was perplexed by the routine eviction of neighbourhood vendors. After studying sociology and law in New Delhi, he returned to Bihar in the early 1990s to work with vendors and has been active in the development sector for 17 years. He started Nidan to support poor men, women and their children involved in the informal economy.

Ashok Khosla
Development Alternatives
www.devalt.org
Schwab Foundation Social Entrepreneur

Development Alternatives' innovative technologies and methodologies combine the dual goals of creating income for the poor and regenerating the environment.

Focus

Climate Change, Energy, Environment, Literacy, Rural Development, Technology, Water, Youth

Background

Half of India's rural population is unemployed, underemployed or informally employed. This population needs income-generating jobs that provide economic security and the products and services required to satisfy their basic needs. At the same time, industries that create these jobs must reduce their waste of natural resources. New technologies and institutional systems are needed to achieve equitable and environmentally sound development.

Innovation and Activities

Development Alternatives seeks to implement good science for social benefit, utilizing low environmental impact. DA initiatives include Shubh Kal, which brings the risks of climate change to the immediate attention of communities in central India's semi-arid regions. The concept implies a "better tomorrow" by exercising an ability to handle climate risks through adaptation and mitigation practices at the grassroots level.

Other projects, such as the Community-led Assessment, Awareness, Advocacy and Action Programme (CLAP) for Environment Protection and Carbon Neutrality, and CLEAN-India, work toward mobilizing community responsibility for environmental assessment and protection, as well as carbon neutrality.

In line with the organization's strategy, DA produces standardized and affordable products for rural markets, such as roofing systems, compressed earth blocks, fired bricks, recycled paper, handloom textiles,

cooking stoves, briquette presses and biomass-based electricity. The simple but highly effective TARA micro-concrete roof tile kit, for example, provides employment for five people, while the TARA vertical shaft brick kiln reduces energy use by 55% and emissions by 50%. DA's paper production units employ 40 workers producing high-quality paper from rags and recycled paper. DESI Power, DA's electric utility, installs mini power stations in villages, fuelled by weeds and agricultural wastes.

TARAhaat, the ICT affiliate of Development Alternatives, brings information technology to villages through its portal (www.TARAhaat.com) and its rapidly growing network of +200 franchised local telecentres, which provide information services, educational courses, e-governance services and Internet connectivity to local people on a commercial basis. The Lifelines Project in rural India uses mobile telephone technology to connect poor farmers in 1,500 villages to critical agricultural information through volunteers. Its functional Hindi literacy programme has helped educate +60,000 rural women, and local groups and official agencies use DA's portable pollution monitoring kits to test water quality in cities and towns.

The Entrepreneur

Ashok Khosla holds a PhD in Experimental Physics from Harvard University. He abandoned a scientific career to focus on issues of environment and development. After helping design and teach Harvard's first course on the environment, he set up and directed the environmental policy unit for the government of India. Subsequently, he worked for the UN Environmental Programme (UNEP) in Kenya before starting Development Alternatives in 1983. He has been a board member of many global environmental institutions, including the Club of Rome, IUCN, WWF, IIISD, SEI and the Alliance for a New Humanity. He is also an advisor to UNEP, UNDP and the World Bank.

Brij Kothari
PlanetRead
www.planetread.org
Schwab Foundation Social Entrepreneur

PlanetRead is dedicated to literacy development in India, working to ensure that people have access to interesting and affordable reading opportunities in their native or other languages.

Focus

Communication/Media, Education

Background

According to UNESCO, India's literacy rate ranks it 147 out of 177 countries surveyed. India is home to hundreds of millions of illiterate people and many more who are neo-literates – individuals who only have rudimentary literacy skills despite having attended several years of primary school. Neo-literacy exists because many primary school students have neither home nor school environments that are conducive to increasing their literacy. Every year approximately 27 million Indian children complete primary school as non-functional readers.

Innovation and Activities

PlanetRead operates on the tenet that literacy skills must be constantly reinforced to avoid a regression toward illiteracy. The organization's key innovation, Same Language Subtitling (SLS), is simple and effective. By using subtitles in popular programming on India's national broadcasting agency, Doordarshan, it exposes viewers to written text, providing them with an opportunity to practice reading in an unobtrusive manner. Subtitles in the same language appear in perfect synchronization with audio tracks so viewers automatically read the exact text they are hearing.

SLS is grounded in rigorous research, is culturally appropriate and cost-effective. The Indian Institute of Management (IIM) Ahmedabad and the Nielsen-ORG Center for Social Research have studied the effects of SLS in 3,179 households since 2003, and the results demonstrated: when exposed to 30 minutes of SLS per

week, the functional literacy rate among students who had at least five years of Hindi schooling grew from 25% to 56%.

Leveraging Doordarshan's media presence across India and the large number of film viewers in major Indian languages, PlanetRead estimates that every US\$ 1 spent on SLS generates about 30 minutes of reading practice for approximately 1,000 people for a year. Compared to India's national literacy mission efforts to distribute reading material and build libraries for neo-literates, SLS is an extremely affordable and innovative way of raising literacy levels.

Currently PlanetRead applies SLS to eight programmes, each in a major Indian language. Programmes have a weekly airtime of 30 minutes, reaching 200 million neo-literate viewers. Having made important inroads in convincing Indian policy-makers of the value of SLS, PlanetRead aims to consolidate SLS adoption within India and then expand its efforts internationally. PlanetRead also runs a for-profit venture, BookBox, which produces animated books with SLS in multiple languages. SLS won the World Bank Development Marketplace Award in 2002, and was honoured at the 2009 Clinton Global Initiative meeting.

The Entrepreneur

Brij Kothari came upon the idea of SLS in 1996 when he was watching a Spanish film with his friends. As a student of Spanish, he desired that the subtitles could be in that language so he could read along and understand the dialogue. Kothari has an MA in Physics from the Indian Institute of Technology (Kanpur) and a Master's and PhD from Cornell University in Communications and Education, respectively. After completing his dissertation, he returned to India and joined the faculty at IIM Ahmedabad. Combating illiteracy through SLS has since become his personal and professional passion.

Chetna Vijay Sinha

Mann Deshi Mahila Bank and Mann Deshi Foundation

www.manndeshi.org

Schwab Foundation Social Entrepreneur

The Mann Deshi Group of Ventures, headquartered in Mhaswad, Maharashtra, is transforming rural women from daily wage earners into role model entrepreneurs.

Focus

Education, Microfinance

Background

The Group manages three institutions that together enable rural women to set up new livelihoods and triple their household incomes: a women-owned rural cooperative bank that extends a range of financial services, a rural mobile MBA school that offers management and entrepreneurship training, and a chamber of commerce for women entrepreneurs that facilitates new social networks as well as market and policy linkages.

80% of India's poor live in rural areas relying heavily on agriculture for their livelihood. The head of the family, of an estimated 20% of rural households in India, are women due to widowhood, desertion or migration of men. 60% of these women are illiterate with minimal education and business skills. Yet they are responsible for managing the family's agricultural business.

If these women receive the right training, with access to markets; not only will their economic position

improve, but so will the well-being of the entire family.

Innovation and Activities

Working largely in agricultural and drought prone regions in the Deccan Plateau, Mann Deshi has enabled 185,000 women to save, 10,000 to own property and 42,000 to set up businesses and emerge as developers of their local economic and social ecosystems. By 2020, MDM aspires to launch 1 million rural women entrepreneurs through partnerships with social enterprises and mainline financial institutions of the country.

The Entrepreneur

An economist, farmer, and activist, Chetna Sinha works for social change in some of the poorest and most drought-stricken areas of rural India. She is the founder and the current president of the Mann Deshi Mahila Sahakari Ltd. (the Bank), a micro-enterprise development bank and Mann Deshi Foundation.

Chetna has been honored with the 2005 Jankidevi Bajaj Puraskar award for rural entrepreneurship. She has also been awarded lifetime membership with Ashoka Innovators for the Public, and was selected for the first class of Yale University's World Fellows program in 2002-03.

Ela Bhatt and Mirai Chatterjee

Self-Employed Women's Association (SEWA)

www.sewa.org

Schwab Foundation Social Entrepreneurs

SEWA provides support to poor, self-employed women in countries with large informal economies.

Focus

Enterprise Development, Financial Inclusion, Labour Conditions and Unemployment, RuralDevelopment, Women, Social Security, Communications/Media, Culture and Handicrafts

Background

While 94% of working women in India are self-employed, they have historically enjoyed fewer legal protections or workers' rights. Most are illiterate and subject to exploitation and harassment by moneylenders, employers and officials. In 1972, Ela Bhatt, a lawyer and head of the women's section of the Textile Labour Association in Ahmedabad, observed the horrendous conditions faced by women working as head-loaders, weavers, needlecraft workers, cigarette rollers and waste collectors. As a result, she became committed to helping women organize themselves.

Innovation and Activities

SEWA provides comprehensive support to poor, self-employed women. Its efforts over four decades to increase the bargaining power, economic opportunities, health security, legal representation and organizational abilities of Indian women have brought dramatic improvements to thousands and influenced similar initiatives around the globe. Based in the Indian state of Gujarat, SEWA's 1.3 million members include 700,000 women within the state, representing +100 informal trades, and an additional 600,000 members in eight other states. It is the largest women's union in India, offering its members an array of financial, health, childcare, insurance, legal, vocational and education services. Its members have created 103 cooperatives, over 3,000 producers groups, forged market links and enhanced bargaining positions. These successful efforts increased members' employment income by 600% from 1994 to 1998.

SEWA Bank, with 400,000 savers, has issued loans to thousands of members. To provide for members' healthcare, it helped start a health cooperative and developed an insurance programme that provides coverage for hospitalization, accidents and loss of life. A SEWA-affiliated team of 500 midwives and health workers serves the healthcare needs of 300,000 individuals, and the insurance programme has developed into the VimoSEWA cooperative, India's first such national-level organization.

SEWA also uses video, telephone, computer and satellite communications to provide information technology to the working class. To address legal issues such as housing, wage disputes and other exploitative issues, it offers its members legal aid services. Currently, SEWA leaders dedicate their time to influence national and international policies that offer support to informal and self-employed workers globally.

The Entrepreneurs

Ela Bhatt graduated with a law degree in 1954, and joined the Textile Labour Association, a union founded by Mahatma Gandhi in 1917. There she observed the conditions of the non-organized sector, primarily comprised of women, and decided to help organize them into unions.

Mirai Chatterjee has a BA in History and Science from Harvard University, and a Master's in Hygiene and Public Health from Johns Hopkins University. She is SEWA's Director for Social Security, responsible for healthcare, childcare and insurance programmes. Chatterjee is on the board of several organizations in India, including the Friends of Women's World Banking and the Public Health Foundation of India. She is a member of the National Advisory Council, appointed by the Prime Minister of India and chaired by Mrs Sonia Gandhi, Chairperson of the United Progressive Alliance. She is also a member of the Committee to Develop Universal Health Coverage in India.

Harish Hande

Selco Solar Light

www.selco-india.com

Schwab Foundation Social Entrepreneur

SELCO Solar Light provides sustainable energy solutions and services to under-served households and businesses in India.

Focus

Energy, Environment, Rural Development

Background

About 57% of India's population does not have electricity and for many more the supply is unreliable. SELCO's approach to the lack of working electricity through much of rural India relies on three principles: the poor can afford sustainable technologies; the poor can maintain sustainable technologies; and it is commercially viable to operate a venture serving the needs of the poor.

Innovation and Activities

SELCO has pioneered energy access to families living below the poverty line through a combination of customized energy service systems, innovative financing and an understanding of market needs of different user groups. Rather than focus on a saturated solar technology production field, SELCO brings the sustainable technology to the base of the pyramid using financing mechanisms that render it affordable and productive for the end user.

To do this SELCO pioneers links between technology, financing, energy services, income generation and quality of life. The organization runs its grassroots operations through 28 Energy Service Centres (ESCs).

The centres market, sell, install and service SELCO's products.

The company's core business is the sale of energy systems that provide electricity for lighting, water

pumping, clean cooking, communications, computing, entertainment and small business appliances.

The company works with banks to structure innovative financing for customers.

A standard SELCO four-light system, for example, costs users approximately US\$ 380. A user will usually pay a small down payment and then monthly instalments of US\$ 6-8 over five years. The user can also pay by generating extra income resulting from additional work made possible with the light and savings from eliminating costly fossil fuels with customized payment schedules.

SELCO further spreads the sustainable technology through "business associates". These entrepreneurs lease solar-powered lights to street vendors in the evening. SELCO has reached 130,000 clients across the Indian states of Karnataka, Kerala and Gujarat. Energy services have led to improvements in the quality of life for thousands of people, including better education outcomes for children who can now study at night.

The Entrepreneur

Harish Hande is an engineering graduate of the Indian Institute of Technology, Kharagpur. He earned his doctorate in energy engineering at the University of Massachusetts, specializing in solar energy. Hande originally started his PhD thesis in heat transfer, but changed his academic focus after visiting the Dominican Republic and observing areas with poverty worse than India using solar energy. Upon returning to Massachusetts, he abandoned his heat transfer thesis and started anew on solar electrification in rural areas, conducting much of his research in India, Sri Lanka and the Dominican Republic. He is recognized as an international expert in the field of renewable energy.

Jockin Arputham and Sheela Patel
Society for the Promotion of Area Resource Centers (SPARC)
www.sparcindia.org
Schwab Foundation Social Entrepreneurs

SPARC works to empower the urban poor in India gain access to the resources they need to upgrade and formalize their settlements.

Focus

Land Security, Housing, Infrastructure

Background

India has one of the world's largest urban populations, with about 350 million people living in cities. The percentage of people living under the poverty line in urban areas is higher than in rural areas, and these numbers are rising. Because cities are poorly planned, most poor people live as squatters on private or public lands and have inadequate access to basic services. This has a significant impact on their health, education and income. Slum dwellers are constantly threatened by eviction and treated as non-citizens who have encroached on cities that need their labour, but are unwilling to accommodate their housing needs.

Innovation and Activities

SPARC forged a three-way alliance with the National Slum Dwellers Federation (NSDF) and Mahila Milan to tackle housing and infrastructure issues for the urban poor. NSDF organizes and mobilizes the urban poor to articulate their concerns and find solutions to the problems they face, while Mahila Milan supports and trains women's collectives to administer and manage their community's resources and participate in NSDF activities. SPARC provides the administrative, financial, policy, documentation and other support necessary for these processes to be successful on the ground.

For 20 years this alliance has developed a strategy to achieve its goal of ensuring secure housing and infrastructure for the urban poor. This involves setting up community area resource centres, encouraging communities to join a savings and credit programme that builds trust within a settlement and strengthens the financial assets of participating families, and demonstrating through pilot projects the housing and

infrastructure models that work for the poor as well as the city.

These initiatives and strategies are geared towards strengthening bonds between poor communities and building their financial, managerial and organizational capacities so that they can take on not only housing and infrastructure projects, but also participate in larger issues of city redevelopment and management.

SPARC has challenged existing practices of service deliveries by the government and has engaged agencies in relating directly to communities. With state support SPARC seeks to create institutional arrangements where communities own and control organizations and institutions that provide services to the poor. It has demonstrated that partnerships between NGOs, communities and government can and do bring change. Today the alliance works in about 70 cities in India and has networks in about 20 countries.

The Entrepreneurs

Born in Mumbai, Sheela Patel has worked since 1974 with urban poor communities, focusing on women and children. She realized that even efficiently delivered welfare does not produce real change for the poor, and organizations working on poverty issues required new ways to address these problems; thus, with other like-minded peers she founded SPARC. She is the Board Chair of Shack Dwellers International.

Jockin Arputham is from the southern Indian state of Karnataka. He ran away from home as an adolescent and lived in the streets and slums of Mumbai. He has worked for more than 40 years in India's slums and shanty towns, building representative organizations to partner with governments and international agencies for the betterment of urban living. He is president of NSDF, which he founded in the 1970s, and of Slum Dwellers International, which networks slum dwellers from over 20 countries.

Joseph Madiath

Gram Vikas

www.gramvikas.org

Schwab Foundation Social Entrepreneur

Helping villagers pool resources to set up water and sanitation infrastructure, Gram Vikas improves the quality of life of poor rural communities in India.

Focus

Education, Health, Rural Development, Water and Sanitation

Background

Joe Madiath became acquainted with the rural poor in the Indian state of Orissa when he led a group of student volunteers from Madras University to provide relief, following cyclone devastation in 1971. Struck by the terrible poverty, particularly among Adivasis (indigenous people) and Dalits (untouchables), Madiath remained to provide further assistance at a time when Orissa's villages lacked the most basic infrastructure. He realized that limited economic options were driving villagers to urban slums in a futile search for prosperity. Hoping to reverse this trend, he and a few friends started Gram Vikas with the goal of improving living conditions in villages, increasing local economic options and restoring dignity to marginalized populations.

Innovation and Activities

Working in extremely impoverished areas of Orissa, Gram Vikas (GV) helps tens of thousands of villagers organize themselves to solve a wide range of social and health problems. GV requires participation by each and every adult in its programmes and provides incentives to encourage villagers to pool their resources to improve village infrastructure and sanitation. This process has led to increased awareness of civic rights and duties and more effective political mobilization.

The core methodology of GV is to harness, through full community mobilization, all physical and human

capital in a village. The organization works with the villagers to create and manage a "village corpus", a fund that draws cash and in-kind contributions from all families based upon their ability to pay. Once the fund is established, it contributes supplementary resources and soft loans for specific projects.

Under a state project, Gram Vikas set up 55,000 biogas systems in Orissa to provide inexpensive fuel for villagers. Through its Movement and Action Network for Transformation in Rural Areas (MANTRA), GV has helped more than 55,422 families in 943 villages build low-cost facilities for safe drinking water and proper sanitation. As a result of every family in the village having a toilet, bathing room and protected piped water supply, water-related diseases have been drastically reduced. All construction makes use of the villagers' own resources, materials and labour, demystifying construction techniques and enhancing their skills. The same approach has been used to build roads, drainage systems, community halls and schools.

MANTRA has won numerous international awards, including the UN Habitat Award (2003), World Bank Development Market Place Award (2003), Kyoto World Water Grand Prize (2006) and Skoll Award (2006).

The Entrepreneur

Recognizing the poor conditions workers faced on his family farms, Joe Madiath at the age of 12 led a movement to organize them to lobby for better treatment. His confrontational role was met with hostility as his family banished him to a boarding school 2,500 km away. When he returned at age 16, Madiath embarked on a bicycle tour across his country and worked with tribal people along the way to improve their conditions. After the successful launch of Gram Vikas, his family finally accepted his views, and his father became fully supportive of his son's activities as a social entrepreneur.

Neelam Chhiber
Industree Crafts Foundation
www.industreecrafts.org
Schwab Foundation Social Entrepreneur

Industree prepares low-income artisans to become owners and entrepreneurs in grassroots community enterprises, linking them with market access to India's booming retail sector.

Focus

Rural Development, Enterprise Development, Culture/ Handicrafts

Background

India, a country with a 5000 year legacy, has about 40 million people working in its vibrant creative sector. However, most of these people live in absolute poverty due to a lack of working capital, market access and design and/or production knowledge. Most are still searching for the enabling mechanisms to transform artisanship into sustainable development and livelihood. At the same time India has seen mass urban migration, bulging cities, environmental degradation and continuing poverty. Industree aims to change the way the Indian creative sector operates, freeing people from poverty while celebrating the art, legacy and culture of India's villages.

Innovation and Activities

Industree focuses on building an eco-system for India's underserved and fragmented artisanal base, which is in serious need of equitable market access, design and updated technical training, and working capital. On the market end, the multi-retail brand Mother Earth was created in 2008 through investment from Future Ventures of the Future Group, one of India's largest retailers. Eight Mother Earth stores are now operating in various cities across India. In 2011, Industree received additional funding from the Grassroots Business Fund, set up by the International Finance Corporation to increase efficiencies in its supply chain. By scaling up, Mother Earth has helped offer producers a direct market platform to the Indian retail market, ensuring steady business, consistent volume and smooth cash flow from year to year.

Industree works with the Indian government Ministry of Textiles through its various schemes, dovetailing trained artisans into market linkages. Industree incubates community enterprises and common production entities that are jointly owned by artisans and local entrepreneurs, typically unemployed or underemployed men and women. Industree leverages the Self-Help Group (SHG) model, wherein production is 100% owned by a group of producers.

For every 100 Indian rupees of revenue for Industree, producer incomes increase by 58 Indian rupees. As a result, community enterprises incubated by Industree and owned by artisanal communities often break even during their first year of operation. These artisan groups invest their working capital into the enterprises so that there is an increased sense of ownership in the operations. In fact, 13% of the shares in Mother Earth are reserved in a mutual benefit trust for producers to purchase at par. Moreover, community enterprises are encouraged to seek retail platforms in addition to Mother Earth, so they can gain more self-sustainability and independent in the long term.

To date, Industree sources products from 600 crafts-based collectives and SHGs in ten Indian states, opening up the Mother Earth brand and market platform for them as well. Industree impacts 10,000 artisans currently, with 150 million Indian rupees of sales in 2011. In five years Neelam Chhiber and her team aim to directly impact more than 50,000 individual artisans by incubating their enterprises and facilitating product diversification, introducing new brands and markets.

The Entrepreneur

Neelam Chhiber, co-founder of Industree, is an industrial designer from the National Institute of Design, India. She is an alumnus of Social Impact International, the Global Social Benefit Incubator, Santa Clara University, US, and of the Harvard Executive Programme.

Padmanabha Rao and Rama Rao
RIVER - Rishi Valley Institute for Educational Resources
www.river-rv.org
Schwab Foundation Social Entrepreneurs

RIVER has developed a learner-guided method to teaching that not only increases learning but also re-engages teachers in their responsibility as educators.

Focus

Education, Youth

Background

Primary education in India suffers from many problems, including a lack of teachers, disengaged students, irrelevant textbook content and chaotic classrooms incorporating multiple grade students under one or two instructors. Although the government has invested heavily in universal primary education, in less developed areas school dropout rates remain as high as 40%, and 70% of students in Class 1 fail to reach Class 5. Overburdened teachers have little creative control of classroom content and teaching methodologies. Left with little external support, teacher absenteeism can be as high as 50%. Collectively, this is leading to dire educational outcomes for students in rural India.

Innovation and Activities

RIVER's key innovation is School-in-a-Box, an activity-based learning programme, where government curricula are adapted for local context and organized into smaller modules that align with each student's ability. Children from different levels learn together in a self-directed fashion, enabling teachers to spend more time with weaker students. Local teachers gain ownership over their learning materials by developing School-in-a-Box sets, consisting of cards, charts and songs customized for their students. RIVER's School-in-a-Box learning materials are cheaper and more durable than textbooks, and its work has already created a critical mass of 500,000 teachers who are replicating the model in 200,000 schools in 15 languages.

RIVER gives teachers extensive support through training, information exchanges and distance learning tools in their network. It also engages parents and local communities in the education accountability chain,

creating feedback loops for quality control wherever its model is replicated.

RIVER is financed largely by state and national governments. Key players in public education, including education secretaries, district administrators, principals and teachers, train in RIVER methodologies for two to four weeks at the Rishi Valley Institute in Andhra Pradesh. RIVER then closely mentors the teams over a period of two years to ensure proper implementation of the model.

As a result of implementing the RIVER methods, attendance in their schools is above 80%, dropout rates are 30% lower, and student learning levels are 40% higher than those of public schools. UNESCO reports confirm the improved math and verbal scores of RIVER students and the enthusiastic learning environment generated by the programme.

Internationally, RIVER is replicating its work in Ethiopia, Nepal, Bangladesh, Germany and Sri Lanka, and partnerships are being formalized in nine other countries. RIVER has launched research partnerships with Harvard University (US), the University of Metz (France) and the University of Regensburg (Germany). RIVER was awarded the Global Development Network Award for being "The 2004 Most Innovative Development Project".

The Entrepreneurs

The husband and wife team of Padmanabha and Rama Rao joined the Rishi Valley education outreach programme in 1987 with post-graduate degrees in education. From 1987 to 1993 they developed the "Ladder of Learning" and tested it in 16 satellite schools in marginalized rural areas. Today, they serve as co-Directors of RIVER, travelling widely across India and abroad to promote their model. The Raos are actively involved with India's key curriculum platform, the National Centre for Education Resource and Training, and have been involved with numerous education appraisal and evaluation missions.

Rajiv Khandelwal and Krishnavtar Sharma
Aajeevika Bureau
www.aajeevika.org
Schwab Foundation Social Entrepreneurs

Aajeevika Bureau provides services to seasonal migrants who leave their villages to find work in cities, factories and farms across India.

Focus

Migration, Labor, Employment

Background

The rural, seasonal migrant workers are a massive workforce with numbers that reach nearly 100 million across India. These workers drift through the economy, often at its very bottom end, remaining largely outside the reach of state services and devoid of opportunities offered by growing markets. Despite the major contributions migrant workers make to India's prosperity, they suffer neglect from employers, the government and society at large. As a large and vulnerable section of India's disorganized labour force, migrant workers have poor social security, little protection from malpractices and hazards, and dim prospects of growth and advancement.

Innovation and Activities

Aajeevika Bureau is a specialized institutional initiative for providing services, support and security to rural seasonal migrant workers. Its focus is based on the belief that rural-to-urban migration is an inevitable socio-economic reality, especially for those unable to generate a meaningful livelihood from rural resources. Despite their major contribution to the economy, rural migrant workers remain excluded from opportunities, services and protection. The work of Aajeevika Bureau is therefore aimed at improving social and livelihood opportunities for migrants while developing services and policies for their advancement.

Aajeevika Bureau works in the registration and issuance of identity cards for migrant labourers, allowing them to access banking, mobile telephone service, as well

as government and citizenship entitlements. The organization offers skills training and job placements for rural youth. Through trade-based collectivization of migrant workers from the disorganized sector, Aajeevika Bureau is able to lend greater voice to this often neglected group.

Aajeevika Bureau also enrolls migrant workers in legal services, insurance and pension plans. It facilitates links with government programmes, food security, health services, and counselling for women and children who experience the long-term absence of male family members. Additionally, Aajeevika Bureau manages migration resource centres that provide knowledge, capacity building and management support to migration initiatives in other NGOs and projects.

Aajeevika Bureau is a non-profit, charitable trust registered in Udaipur, Rajasthan, which has helped over 50,000 migrants since its founding in 2005.

The Entrepreneurs

Rajiv Khandelwal has worked in a wide range of rural development, employment and entitlement programmes and projects in Rajasthan. He has also served as a consultant to NGOs and donors while advising a number of international and government agencies. After a two year stint in East Africa in early 2000, he returned to Udaipur to establish Aajeevika Bureau in 2005.

Krishnavtar Sharma is a senior social worker in Udaipur, India. He has coordinated self-help programmes, natural resources work, employment and legal aid programmes, and has overseen capacity-building programmes of development workers before joining Rajiv Khandelwal to establish Aajeevika Bureau as a specialized migration organization.

Rajendra Joshi

Saath

www.saath.org

Schwab Foundation Social Entrepreneur

Saath's public-private partnership model is integrating slum residents in the Indian city of Ahmedabad into the formal economy while improving their living conditions.

Focus

Education, Health, Financial Inclusion, Labour and Unemployment

Background

In 2007, UN-HABITAT estimated that 1 billion people worldwide live in slums, and that this figure is likely to double by 2030. Rapid urban migration will exacerbate this problem in India, where more than 60 million people live in slums. Slum residents often have substandard housing, insecure land tenure, poor access to basic services and a systemic lack of opportunities. Simultaneously, slums are vital pockets of economic activity; there is considerable potential for wealth creation if their residents can participate in the formal economy. While government infrastructure investments and programmes are essential for uplifting slum populations, there is a dire need for social enterprises to help them utilize resources offered by the public and private sectors.

Innovation and Activities

Saath's work in Ahmedabad, in the Indian state of Gujarat, has demonstrated that a market-based approach can successfully generate socio-economic wealth for slum populations while creating market opportunities at the base of the pyramid for companies. Its Integrated Slum Development (ISD) approach offers an array of services across healthcare, education, livelihood development, microfinance, infrastructure and information.

Saath's work began in health and education when founder Rajendra Joshi saw the need to provide basic public services in the face of government failures. Today, these programmes impact 14,000 households annually. Since the 1990s, Saath's Slum Networking

Programme has brought slum residents, utility companies and the Gujarat government together to provide water, electricity and road infrastructure to over 6,000 households on a fee-paying basis. Saath's livelihood programmes with employers have placed 25,000 youths and housewives into formal sector employment, and are complemented by its growing microfinance practice. Saath has also expanded these services to rural Gujarat along with its natural resource management programmes, impacting over 7,000 households.

Saath's latest innovation is the Urban Resource Center (URC), which serves as critical linkage points to connect slum residents with information, knowledge and services from governments, NGOs and private companies. To date, four URCs serve 13,000 households across Ahmedabad for an annual subscription fee. Saath is also actively working with academic institutions, NGOs and urban planners to draft policy suggestions that address land tenure issues critical to slum development.

The Entrepreneur

Rajendra Joshi was born and raised in Tanzania before moving back to India for post-secondary education. During this time he was struck by the inequality among different castes and communities. After working as a salesman for two years after graduation, he was introduced to the work of Father Emiro Reviti, a Jesuit priest working in Ahmedabad's slums. As an educator, Joshi developed a curriculum to attract and retain students in schools. His experience allowed him to listen to stories of slum residents first-hand as they displayed both anguish and hope amidst difficult living conditions. He also realized that contrary to popular belief, slum residents were actually willing to pay for essential good and services, and not solely interested in free handouts from the government and NGOs. This sparked Joshi's desire to pioneer a sustainable response that would help lift slum residents out of poverty and place them at the centre of development

Sanjit (Bunker) Roy
Barefoot College
www.barefootcollege.org
Schwab Foundation Social Entrepreneur

Barefoot College works with marginalized, exploited and impoverished rural poor communities, guiding them on a path towards self-sufficiency and sustainability.

Focus

Education, Renewable Energy, Rural Development, Technology, Women

Background

Created in 1972, Barefoot College in Tilonia, Rajasthan, was inspired by the principles of Gandhi and around the concept of the village as a self-reliant unit. The college benefits the poorest of the poor, offering practical skills and knowledge through a learning-by-doing approach to education. In particular, the college focuses on training illiterate men and women to work in the areas of solar energy, water, healthcare, rural handicrafts, communications and women's empowerment.

Innovation and Activities

Barefoot College demonstrates that illiteracy is not a barrier to poor communities developing themselves and that the most sophisticated technologies can be disseminated by poor rural men and women who can barely read and write. As such, thousands of people are trained each year to be teachers, doctors, midwives, dentists, health workers, solar engineers, water drillers and testers, hand pump mechanics, architects, artisans, designers, masons, communicators, computer programmers and accountants.

The Barefoot campus itself is a testament to the quality of its training programmes. Barefoot-educated architects and masons constructed most of the campus out of low-cost materials and it is the only fully solar-powered college in India.

Barefoot engineers have also helped electrify 35,000 houses with solar energy in 1,000 villages in 37 countries, saving 4.6 million litres of kerosene from polluting the environment. And since 1986, Barefoot engineers have helped collect rainwater in 901 schools in remote villages in India as well as Afghanistan, Ethiopia, Mauritania, Senegal, The Gambia, Sierra Leone and Mali, providing water for drinking and sanitation to 2.65 million rural children. In addition, 1,513 rainwater harvesting structures have been built in rural schools and community centres with a total capacity of 96.65 million litres of water every year.

The Entrepreneur

For over 40 years Sanjit (Bunker) Roy has demonstrated the power and impact of the grassroots community movement, and the need for social entrepreneurs to be social activists first. He was influenced by Mahatma Gandhi's spirit of service and thoughts on sustainability. In 2010, Roy was selected by Time magazine as one of the 100 most influential personalities in the world, and in 2008 The Guardian named him one of 50 environmentalists in the world who could save the planet. He has also won a number of other accolades, including the: Sierra Club Green Energy Award (2009); Robert Hill Award for Promotion of Solar Energy (2009); Condé Nast Traveler Environmental Award (2009); SUEZ Environment-Water for All Foundation Special Prize (2009); ALCAN Award for Sustainability (2006); Skoll Award for Social Entrepreneurship (2005); Tyler Prize for Environmental Achievement (2004); Ashden Award for Sustainable Energy (2003); St Andrews Prize for the Environment (2003); Tech Museum for Innovatoin Award (2002); and the environment category of the Stockholm Challenge Award for Information Technology (2002).

Shobha A. Arole
Comprehensive Rural Health Project (CRHP)
www.jamkhed.org
Schwab Foundation Social Entrepreneur

By partnering with village communities in India, the Comprehensive Rural Health Project brings modern healthcare services for the rural poor.

Focus

Health, Rural Development, Women

Background

In 1970 malnutrition and infant mortality were pervasive problems in India's state of Maharashtra. Less than 1% of the population had systems for the disposal of solid waste, modern health services were non-existent and cholera, typhoid and malaria were highly prevalent. Having grown up in rural India, Raj Arole (1934-2011) understood that any healthcare delivery system would have to confront cultural superstitions about the causes of illness as well as caste, religious, gender and political divisions. After finishing medical school, Arole and his late wife, Mabelle, began engaging villagers in the creation of modern healthcare services for the rural poor.

Innovation and Activities

The Comprehensive Rural Health Project, a community-based healthcare programme for the rural poor, has brought about extraordinary health and social improvements in hundreds of villages in Maharashtra. Despite the region's extreme poverty, severe gender and caste inequality and minimal public health services, CRHP has achieved exceptional results by training local village healthcare workers and helping villagers address economic, social, agricultural and health needs through self-organization.

In the early days of CRHP, the Aroles earned the trust of communities by inviting all groups to volleyball games, which then became meeting places for discussions about village development. These discussions led to the formation of farmers' clubs to address such issues as inadequate drinking water and poor sanitation. The clubs eventually conducted health surveys as a crucial step towards overcoming traditional beliefs about the causes of disease, and identified simple ways to

improve health, like draining puddles that attracted mosquitoes.

The clubs encouraged women to become village health workers. With coaching and guidance from the Aroles, these women provided prenatal care, monitored child immunizations and coordinated village waste management. The village health workers in turn organized women's development associations, which initiated credit circles to fund cooperative business enterprises. Between 1971 and 1993 infant mortality rates in areas where CRHP worked plunged by 84%, while maternal mortality dropped by 75%.

CRHP has been increasingly involved in public policy advocacy, while establishing a primary healthcare model for relevant, appropriate and cost-effective community-based hospital care. Their training programmes in community-based health and development, leadership, management, and personal development have been replicated worldwide, impacting communities in +100 countries. The knowledge and skills have been shared with +20,000 participants nationally and internationally for more than a decade.

The Entrepreneur

The late Raj Arole, co-founder of CRHP and father of Shobha Arole, was born in Jamkhed to a Dalit family (Untouchables) that had converted to Christianity. His parents, who were schoolteachers, sent him to a private English school, where he remained consistently at the top of his class. Against the odds because of his caste, Arole went on to one of the most prestigious medical colleges in India, the Christian Medical College at Vellore. There, he met his future wife Mabelle. On their wedding day, they took a vow to work together and devote their lives to the marginalized and disenfranchised people living in Indian villages. Today, their daughter Shobha, a medical doctor and anaesthesiologist, follows in their footsteps in her role at the CRHP.

Health

Background

There are an estimated 45 million blind people in the world, an additional 269 million who are visually impaired, about 90% of which live in developing countries where they face poverty, illiteracy and diseases of epidemic proportions. In India alone there are 12 million blind people, more than in any other country. Most of this blindness is easily treatable by simple cataract surgery or a pair of glasses. The challenge, however, is to address affordability and access issues so those who can have their sight restored can re-enter the workforce and support themselves and their families.

Innovation and Activities

Founded in 1976 by Dr G. Venkataswamy with the mission to eliminate needless blindness, Aravind Eye Care System is the largest and most productive eye care facility in the world. It encompasses five hospitals, two surgical centres, seven community eye clinics, 39 primary eye centres, two managed eye hospitals, a manufacturing centre for ophthalmic products, an international research foundation, and a resource and training centre that is revolutionizing hundreds of eye care programmes across the developing world.

Aravind created a sustainable service delivery model, currently providing 55% of its services free or significantly subsidized for low-income families. Some of the activities and innovations, carried out through cost-effective and efficient processes, are: producing

available, high-quality, low-cost intraocular lenses and other ophthalmic supplies; extensive use of telemedicine and other technologies to improve rural access; annually recruiting and training hundreds of young rural women as eye care technicians, thereby giving them a career opportunity and significantly reducing the cost of eye care; and establishing a network of Vision Centres with low-cost telemedicine technology providing primary eye care to rural areas and thus enhancing access.

Aravind's success in eliminating needless blindness is based on engaging in direct action and creating competition. Real competition is encouraged through a proactive capacity-building process that shares lessons learned, detailed procedures, systems, forms and software. For example, in 1993 the Lions Aravind Institute of Community Ophthalmology was established to help Aravind transfer its expertise and experience to other eye care institutes in India and elsewhere. It has helped replicate best practices in over 270 eye hospitals worldwide.

The Entrepreneur

Thulasiraj Ravilla was born in a small village in southern India, received his MBA from the Indian Institute of Management in Calcutta, and remained in the city working for a multinational company. In 1981, he joined Aravind and spent a year at the University of Michigan studying hospital and health management. Since then he has been part of the leadership team that has built Aravind into the world's largest eye care provider. In 1992, he was instrumental in establishing the Lions Aravind Institute of Community Ophthalmology. Ravilla served five years as the Southeast Asia Regional Chair of the International Agency for Prevention of Blindness, and in 2003 founded VISION 2020: The Right to Sight - India, a consortium of voluntary eye care institutions, heading it until 2008.

Vijay Mahajan

Bhartiya Samruddhi Investments and Consulting Services (BASIX)

www.basixindia.com

Schwab Foundation Social Entrepreneur

BASIX promotes sustainable livelihoods for the rural poor and women through the provision of financial services and technical assistance.

Focus

Microfinance, Rural Development

Background

While the concept of microfinance institutions (MFIs) spread rapidly in neighbouring countries such as Bangladesh and Indonesia, India had a slower start. Until the early 1990s banks were nationalized and mandated to reach the poor with subsidized loans. While the intention was laudable, in practice loans to the rural poor by the banking sector were riddled with corruption and red tape, limiting what could have been a powerful economic intervention for social change. In 1992 India started to reform its banking system to restore financial health, and as a result the number of small loans going to rural areas decreased rapidly, since they were less profitable. BASIX was established in 1996 with the ambitious target of disbursing microcredit to one million of India's rural poor.

Innovation and Activities

BASIX is the first MFI in India and among the first in the world to attract commercial equity investments internationally and within India. By successfully lobbying for changes in the Indian regulatory policy framework, BASIX helped create a viable institutional space for MFIs in India. The mission of BASIX is to promote a critical mass of opportunities for the rural poor and to attract commercial funding by proving that lending to the poor can be a viable business.

BASIX tailors its lending techniques and distribution channels to different customer groups and arranges technical assistance and support services for its clients. It aggressively uses IT applications to process large numbers of transactions and support innovative delivery channels, such as franchise agents using hand-held devices to serve poor borrowers. BASIX

does not confine its loans to the landless poor and self-employed as do most other MFIs, but rather argues that most of the poorer population groups prefer to be employed. Thus, providing credit to the micro-enterprises that can employ them is as important as providing credit to the poor themselves. Studies show that on average, the income of BASIX borrowers increases 20-30% in 2-3 years, and that they also generate substantial wage employment for others.

Based in Hyderabad, in the state of Andhra Pradesh, BASIX has approximately 250 full-time employees, mostly in rural districts, and over 400 village-based customer service agents reaching +7,500 villages in more than 40 districts in nine Indian states. BASIX works with nearly 95,000 borrowers, including women in self-help groups (SHGs) and federations. It has cumulatively disbursed over 137,000 loans worth +US\$ 33 million, 41% of which are loans to SHGs. BASIX's pioneering work with SHGs and its advocacy for microcredit have been two of the factors that led Indian banks to extend over US\$ 44 million worth of microcredit to more than 12 million rural poor women since 1998.

The Entrepreneur

Vijay Mahajan was educated at India's Institute of Technology in Delhi, the Institute of Management in Ahmedabad, and is a Fellow at Princeton's Woodrow Wilson School of Public and International Affairs. He could have chosen many different life paths and lucrative careers, but instead chose to channel his talents and education to improve rural Indian society. In 1983 he co-founded PRADAN, one of India's most respected rural development NGOs, and in 1998 co-founded Sa-Dhan, the association of Indian MFIs. In 2001 he helped found the Andhra Pradesh Mahila Abhivruddhi Society (APMAS), a capacity-building institution for the +500,000 women's SHGs in the state. Mahajan has published a book on the rural non-farming sector in India and more than 50 articles on rural development and microfinance.

Vikram K. Akula

Schwab Foundation Social Entrepreneur

Vikram Akula works toward achieving financial inclusion through promoting mobile banking in India.

Focus

Financial Inclusion, Technology

Background

Vikram Akula has been at the forefront of creating market-based solutions for financial inclusion for more than two decades. While mobile banking has been successful in countries like Kenya and the Philippines, it is not yet widespread in India. This is partly due to regulatory constraints and a lack of investments in creating cashless ecosystems in rural India. His new venture in India is focused on setting up such an ecosystem.

Innovation and Activities

Born in Hyderabad, India and raised in the US, Akula started his career in 1990 as a community organizer of women's self-help groups for the Deccan Development Society in rural Andhra Pradesh, India. He then joined the World Watch Institute in Washington, DC as a researcher. As a Fulbright Scholar he led an action-research project in India that provided micro-credit to poor farmers for food security.

After extensive research in the field and graduate study, he founded SKS as a non-profit in late 1997. He led the organization until 2004, when he joined McKinsey & Company in Chicago as a management consultant. In 2005, he returned to SKS Microfinance to lead its conversion to a for-profit finance company named SKS Microfinance. In doing so, he pioneered a commercial model of microfinance to attract mainstream capital and create a vehicle for unprecedented scaling of

microfinance. This model garnered investments from premier venture capitalists, such as Vinod Khosla, Sequoia Capital, George Soros' Quantum Fund and the Narayan Murthy's Catamaran Fund. He also created SKS Trusts for borrowers, which became the second largest investor group in SKS Microfinance, enabling borrowers to not only access finance but to benefit from wealth creation as company owners. He led the company to a successful IPO in 2010, which was oversubscribed 14 times. Under his leadership SKS grew to 7.3 million active borrowers in 2010-11, disbursing +US\$ 5 billion in loans, while providing a range of micro-insurance products. He resigned in November 2011.

Akula's current social venture, mobile banking in India, is launching an initiative to create a mobile banking ecosystem centred around small village grocery (kirana) stores. He intends to work with existing technology providers, mobile phone companies, banks and microfinance clients to open bank accounts for clients, train them in mobile banking and use incentive systems to encourage the use of mobile banking. The goal is to increase the use and demand for mobile banking so that supply-side players will make investments to adapt their systems for mobile banking.

The Entrepreneur

Vikram Akula has a BA in Philosophy and English from Tufts, an MA in International Relations from Yale, and a PhD in Political Science from the University of Chicago. His dissertation focused on the socio-economic impact of microfinance and he is the author of *A Fistful of Rice; My Unexpected Quest to End Poverty Through Profitability*.

Vikram Kumar
Dimagi
www.dimagi.com
Schwab Foundation Social Entrepreneur

Dimagi equips community health workers with mobile phones running Dimagi's mHealth platform: CommCare. The software allows health workers to instantly track patient data from previous home visits, thus improving the quality of maternal and prenatal care.

Focus

Health, Technology

Background

Nearly a billion people in low income countries live in extreme poverty. In these populations, almost 10% of infants die during their first year, compared to 0.5% in wealthy countries. Maternal mortality is so high in some countries that women have a 5% lifetime risk of dying during child birth alone. The onset of labour marks the start of a high-risk period for both mother and baby that does not ease until at least 48 hours after birth. During this short period of time, 150,000 maternal deaths, 1.6 million neonatal deaths, and 1.2 million stillbirths occur each year. Most of these deaths have been attributed to poor service provision and lack of access. Yet the global health community does not lack guidelines for improving maternal health. There are largely agreed upon interventions for every stage of maternal care whose efficacy has already been proven. Many health systems have started to increase their focus and resources on supporting community health programs and Community Health Workers (CHWs) as a method to improve the delivery of these known, proven interventions.

Innovation and Activities

Dimagi's vision is to apply open-source and scalable technology to improve community health programs across the world. Dimagi designed CommCare, an mHealth platform for Community Health Workers (CHWs) that takes an evidence-based approach to improving access, quality of care, and accountability.

CommCare transforms the conventional practice of a CHW manually filling paper registers and carrying large flipbooks. With CommCare, each CHW is equipped with an inexpensive phone running the open-source software. The CHW registers clients using electronic forms that are designed for low-literate users.

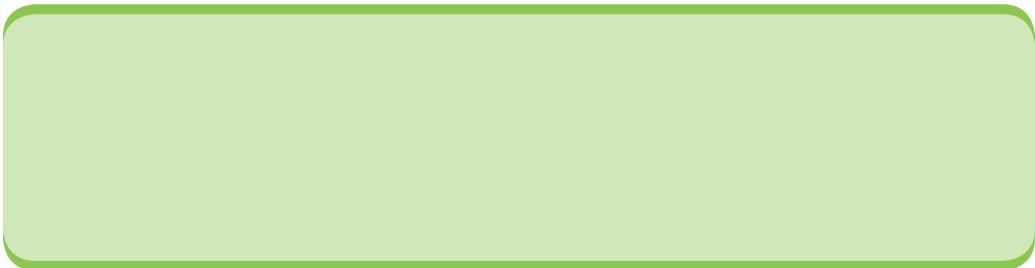

During home visits, CommCare aids a CHW with real-time guidance through key counselling points and decision support. Each counselling point is reinforced by images, audio, or video clips that the CHW can use to engage her clients. Dimagi has found multimedia to be universally popular among both CHWs and clients, and there is strong evidence that recorded audio improves the persuasive power of health messaging. CommCare also submits visit data in real-time to its central cloud server, CommCareHQ, where it is privacy-protected, backed up, and immediately made accessible to supervisors and program managers.

Dimagi has a three-tiered pricing system differentiated by ability to pay and level of on-going IT support required. Dimagi has collaborated with over 40 partners around the world, including the Gates Foundation, the World Health Organization, large NGOs, and national governments. To date community health workers have registered 60,000 patients across 13 countries. Multiple studies have demonstrated improvements in the frequency, quality, and thoroughness of care that community health workers using CommCare provide to pregnant women.

The Entrepreneur

Vikram Kumar is an engineer and pathologist who developed one of the earliest video games for health on a wireless mobile device. He studied engineering at the Indian Institute of Technology and Columbia University and medicine at the Harvard-MIT Division of Health Sciences and Technology.
